# Exercise 1: Getting Started with ASTRA-sim

**William Won**

Ph.D. Student, School of Computer Science  
Georgia Institute of Technology  
william.won@gatech.edu

**Acknowledgments:** Srinivas Sridharan (Facebook), Sudarshan Srinivasan (Intel)

# Agenda

---

Time (PDT)	Topic	Presenter
1:00 – 2:00	Introduction to Distributed DL Training	Tushar Krishna
2:00 – 2:20	Challenges on Distributed Training Systems	Srinivas Sridharan
2:20 – 3:30	Introduction to ASTRA-sim simulator	Saeed Rashidi
3:30 – 4:00	Coffee Break	
4:00 – 4:50	<b>Hands-on Exercises on Using ASTRA-sim</b>	<b>William Won and Taekyung Heo</b>
4:50 – 5:00	Closing Remarks and Future Developments	Taekyung Heo

## Tutorial Website

*includes agenda, slides, ASTRA-sim installation instructions (via source + docker image)*

<https://astra-sim.github.io/tutorials/mlsys-2022>

**Attention:** Tutorial is being recorded

# Objective

---

- Installing ASTRA-sim
  - Download
  - Compilation
- Writing Input Files
  - Network
  - System
  - Workload
- Running ASTRA-sim
  - Running ASTRA-sim
  - Understanding Results

# Downloading ASTRA-sim

Prerequisite: Check installation dependencies

<https://astra-sim.github.io/tutorials/mlsys-2022/installation>

(1) Clone ASTRA-sim tutorials GitHub repository

```
$ git clone https://github.com/astra-sim/tutorials.git
```

```
$ cd tutorials/mlsys2022/
```

(2) Run setup script

```
$ ./clone_astra_sim.sh
```

cf., Offers Docker Image

```
$ docker pull astrasim/mlsys2022-tutorial
```

```
$ docker run -it strasim/mlsys2022-tutorial
```

# Compiling ASTRA-sim

(1) Go to **Exercise 1** directory

```
$ cd exercise_1/
```

(2) Compile ASTRA-sim

```
$ ./build.sh
```

# Exercise: Ring All-Reduce

---

Objective:

- (1) We will configure an 8-NPU Ring
- (2) And run **1 MB All-Reduce** on it

# Configurations: Network

- **Ring topology with 8 NPUs**
- **500 ns** (latency), **50 GB/s** (bandwidth)
- **2 links** per NPU

# Configurations: Network

inputs/ring.json

```
{  
  "dimensions-count": 1, ← 1D network  
  "topologies-per-dim": ["Ring"], ← Ring topology  
  "units-count": [8], ← 8 NPUs  
  "links-count": [2], ← 2 links per NPU  
  "link-latency": [500], ← 500ns link latency  
  "link-bandwidth": [50] ← 50GB/s link bandwidth  
}
```

# Configurations: System

`inputs/ring.txt`

<code>scheduling-policy: LIFO</code>	←	LIFO chunk scheduling policy
<code>endpoint-delay: 10</code>	←	10ns delay per NPU
<code>active-chunks-per-dimension: 1</code>	←	1 active chunks
<code>preferred-dataset-splits: 4</code>	←	4 chunks per collective
<code>boost-mode: 1</code>	←	fast simulation when symmetric
<code>all-reduce-implementation: ring</code>	←	ring All-Reduce Algorithm
<code>all-gather-implementation: ring</code>	←	ring All-Gather Algorithm
<code>reduce-scatter-implementation: ring</code>	←	ring Reduce-Scatter Algorithm
<code>all-to-all-implementation: direct</code>	←	direct All-to-All Algorithm
<code>collective-optimization: localBWAware</code>	←	collective optimization

# Configurations: System

`inputs/ring.txt`

`scheduling-policy: LIFO`

`endpoint-delay: 10`

`active-chunks-per-dimension: 1`

`preferred-dataset-splits: 4` ← 4 chunks per collective

`boost-mode: 1`

`all-reduce-implementation: ring` ← ring All-Reduce Algorithm

`all-gather-implementation: ring`

`reduce-scatter-implementation: ring`

`all-to-all-implementation: direct`

`collective-optimization: localBWAware`

# Configurations: Workload

inputs/all\_reduce.txt

MICRO ← training loop

1 ← #layers

allreduce -1 1 NONE 0 1 NONE 0 1 ALLREDUCE 1048576 1 ← layer data

Metadata		Forward			Input grad			Weight grad			Layer
Layer Name	(rsvd.)	Compute Time	Comm. Type	Comm. size	Compute Time	Comm. Type	Comm. Size	Compute Time	Comm. Type	Comm. Size	Delay
allreduce	-1	1	NONE	0	1	NONE	0	1	ALLREDUCE	1048576	1

1 MB

# Running ASTRA-sim

Run ASTRA-sim

```
$ ./exercise_1.sh
```

```
exercise_1.sh
```

```
"${BINARY}" \
```

```
  --run-name="Exercise 1" \ ← Run name  
  --network-configuration="${NETWORK}" \ ← Network  
  --system-configuration="${SYSTEM}" \ ← System  
  --workload-configuration="${WORKLOAD}" \ ← Workload  
  --path="${RESULT_DIR}/" ← Result file path
```

# Running ASTRA-sim

45,681 ns (45.681  $\mu$ s)

```
all passes finished at time: 45681, id of first layer: allreduce
path to create csvs is: /usr/scratch/will/tutorials/asplos2022/exercise_1/result/
success in opening file
*****
Time to exit: Sun Feb 27 06:46:51 2022
all-reduce Collective implementation: ring
reduce-scatter Collective implementation: ring
all-gather Collective implementation: ring
all-to-all Collective implementation: direct
Collective optimization: localBWAware
Total sim duration: 0:0 hours
Total streams injected: 4
Total streams finished: 4
Percentage of finished streams: 100 %
